Functional Pain Mx

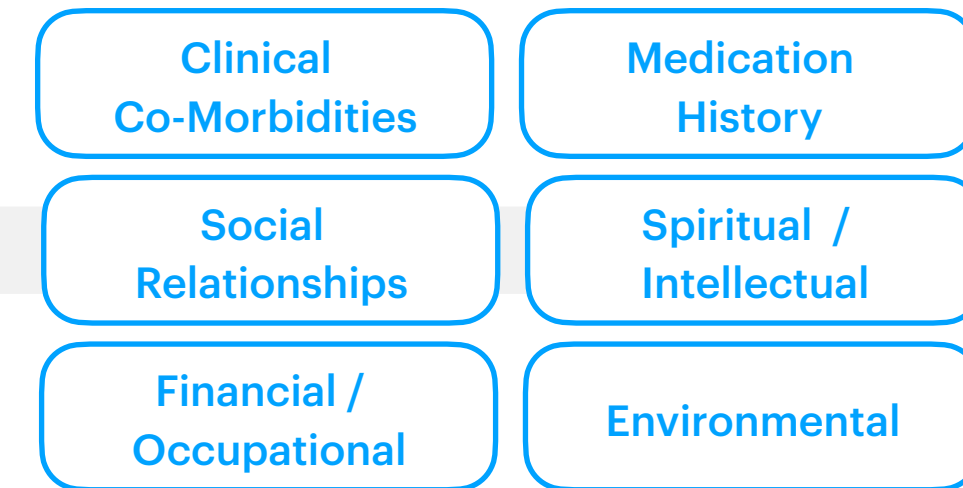

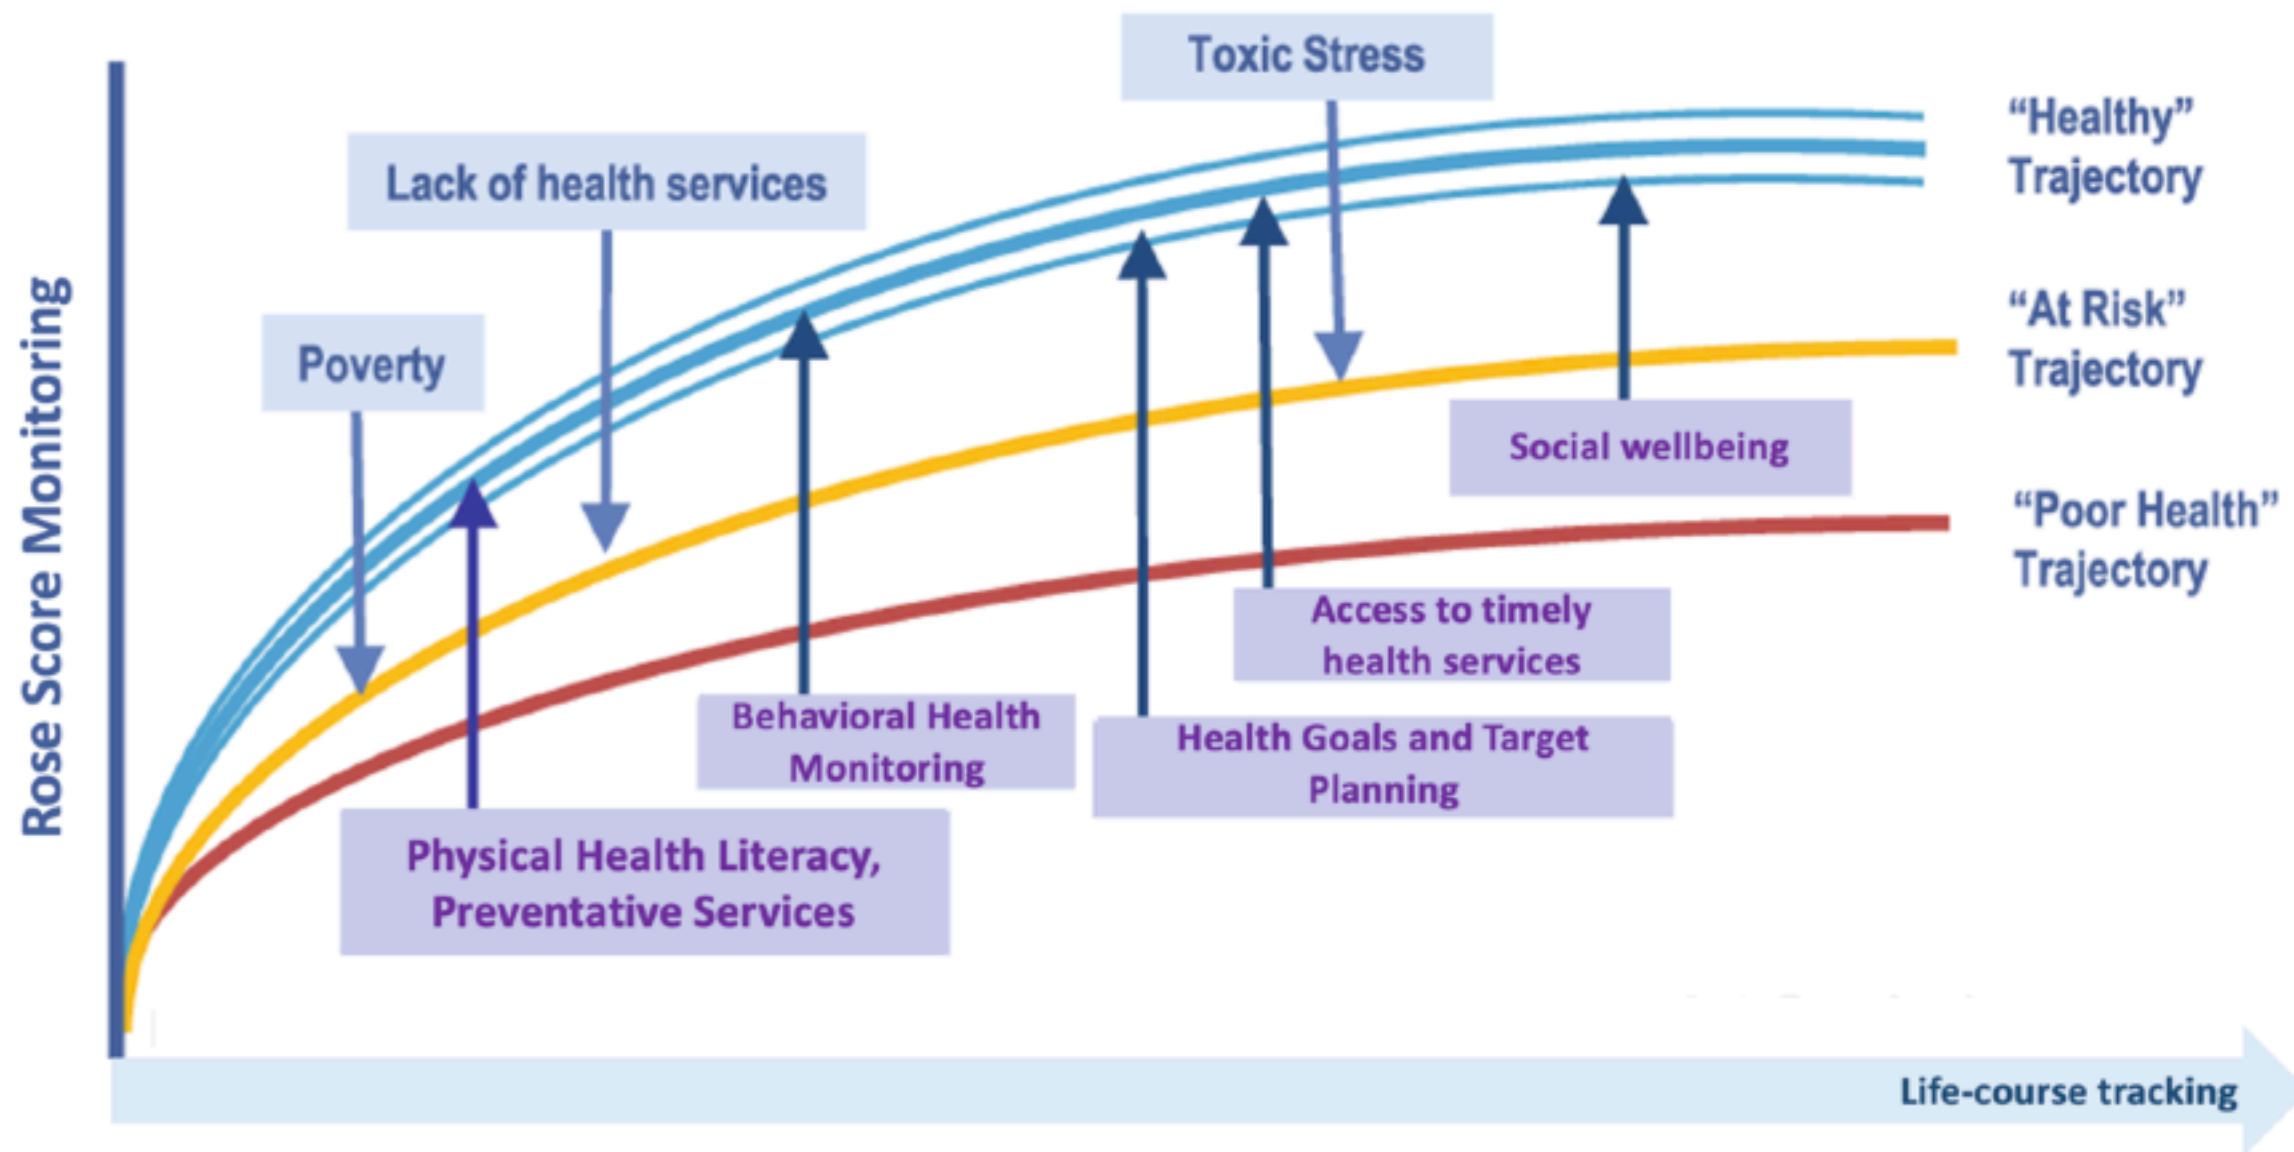

- Evaluate user's Rose Score Trajectory :-
 - Better understand their patient's ability and resiliency to different environmental and behavioral stressors.
 - Adjust assessments, guided care modules and exercises as needed.
 - Providers save time from modifying and updating rather than produce new care plan each time

Rose Augmented Care Planning

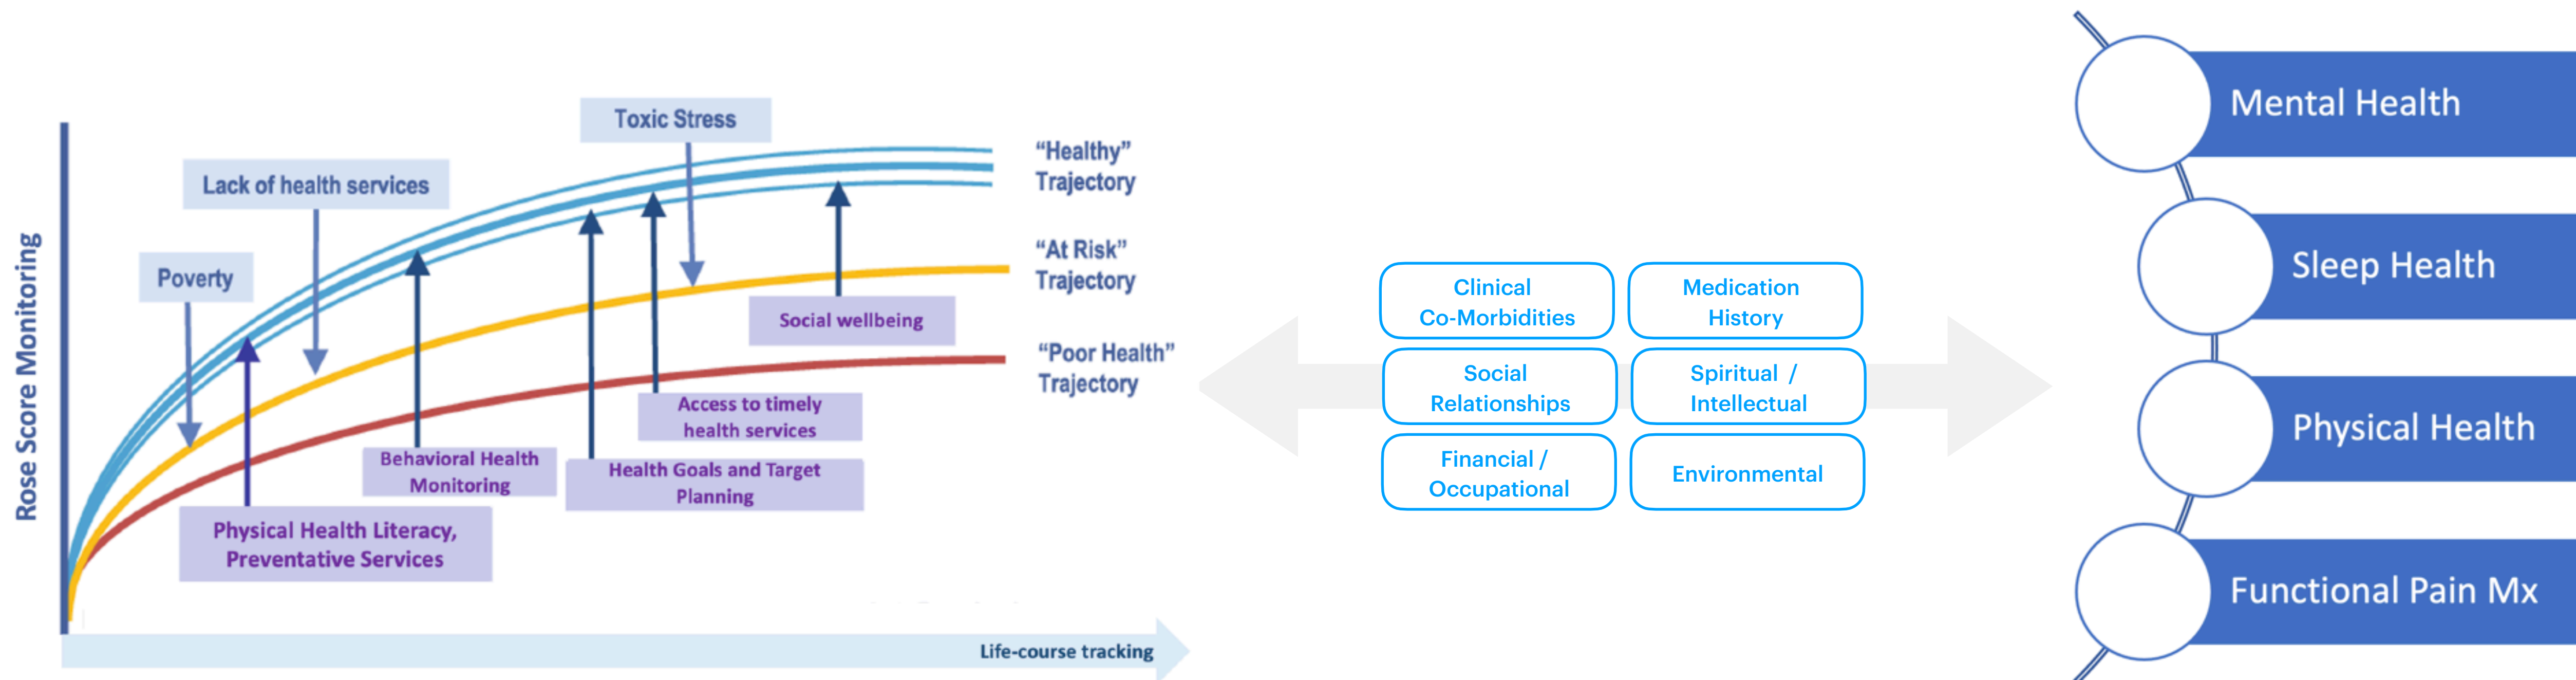

Rose "Contextual" Care Planning

- Adding “Context” to clinical care planning :-
 - See associated changes in user overall well-being (behaviors, social, physical, social interactions etc.)
 - Bring socio-environmental determinants that could potentially be useful in providing larger context
 - Improve engagement with patients by understanding both objective and subjective cues from patients.

Rose “Contextual” Care Planning

- Adding “Context” to clinical care planning :-
 - See associated changes in user overall well-being (behaviors, social, physical, social interactions etc.)
 - Bring socio-environmental determinants that could potentially be useful in providing larger context
 - Improve engagement with patients by understanding both objective and subjective ques from patients.
